EDUCATION

California Polytechnic State University, San Luis Obispo

San Luis Obispo, CA

Bachelor of Science in Computer Engineering | 3.83 GPA | President's List

Expected May 2029

- Recipient of the Robert T. Nahas Scholarship (2025) and PG&E Better Together STEM Scholarship (2025)

SKILLS

Programming: Python, C/C++, C#, Java, JavaScript, Typescript, Assembly

Systems & Embedded: FreeRTOS, STM32, ESP32, CAN, Microcontrollers, RISC-V, I2C, UART

Web: Node.js, React, Next.js, MongoDB

Tools: Git, Azure, Linux, Unity, Fusion360

Interests: Wearable Robotics, Weightlifting, Wrestling, Console Modding (Nintendo), E-waste Recycling, Lion Dancing

EXPERIENCE

Cal Poly Summer Undergraduate Research Program

San Luis Obispo, CA

Undergraduate Researcher

May 2026 - Present

- Design and prototype a wearable upper-limb tensegrity exoskeleton using CAD and additive manufacturing
- Develop an ESP32-based motor control system with custom embedded electronics and stepper drivers
- Optimize force transmission with cables, springs, and actuators to support closed-loop feedback control

Hack4Impact Cal Poly

San Luis Obispo, CA

Software Engineer

November 2025 - Present

- Engineer two Unity gamemodes for Kids First Initiative, resolving 25+ cascading gameplay and logic bugs
- Built full-stack cloud-sync save schema using Next.js, TypeScript, and MongoDB, to track 100+ users
- Implemented 10+ gameplay, UI, and backend features in an Agile software development environment

Cal Poly Racing

San Luis Obispo, CA

Formula SAE Firmware Developer

September 2025 - Present

- Develop drag reduction system and CAN firmware in C++ using FreeRTOS tasks on STM32 architecture
- Design real-time task scheduling and inter-task communication for Cal Poly EV control systems
- Perform PCB bring-up, signal probing, wiring, and board validation using standard lab instrumentation

Level Up MSP (Managed Service Provider)

San Jose, CA

Information Technology Engineering Intern

June 2024 - August 2025

- Deployed routers, switches, and NAS for 10+ SMB clients, improving network stability and throughput
- Automated Azure backup monitoring scripts in Python, ensuring 100% data recovery for 25+ businesses
- Resolved recurring BSOD and kernel failures across 50+ clients, improving uptime from days to weeks

PROJECTS

Spinal Battery System - Embedded Systems, Autodesk Fusion, C++

June 2026 - Present

- Modular wearable spine that integrates distributed battery storage, power routing, and expansion interfaces

Cyberpunk Mantis Blades - Arduino, Autodesk Fusion, Embedded Systems, I2C

October 2024 - May 2025

- Designed a servo-actuated prosthetic controlled by wrist movement using embedded microcontrollers

Augmented Reality Sand Table - Unity, Kinect, Linux

February 2025 - May 2025

- Built a real-time topographic simulation projecting terrain deformation using motion-sensing input

LEADERSHIP & INVOLVEMENT

Hack4Impact Cal Poly

San Luis Obispo, CA

Director of Finance & Operations

May 2026 - Present

- Managed chapter finances, budgeting, reimbursements, and operational logistics for executive leadership.
- Coordinated meetings and organizational processes to support engineering and nonprofit initiatives.

Irvington Hardware & Technology Club

Fremont, CA

Founder/President

October 2023 - May 2025

- Founded a student-run organization focused on hardware, AI, embedded systems, and electronics recycling
- Created workshops covering GPU fundamentals, C++, Linux, and emerging AI frameworks like DeepSeek
